## OBJECTIVE

To leverage my extensive experience in developing and managing web applications, including user interface design, backend functionality, and administrative features, to contribute to innovative and dynamic projects. I aim to apply my expertise in user profile management, job application systems, and admin panel functionalities to deliver high-quality solutions and drive successful outcomes for a forward-thinking organization.

## EXPERIENCE

**Aug 08 2022 - Jan 20 2023**

- **System Engineer**
  Infosys
  I worked at Infosys for 6 months as a Systems Engineer, where I learned SQL, MongoDB, Power BI, and Apache Spark.

**Dec 1 2023 - Still Working**

- **Application Developer**
  BSIT Software Services Pvt Ltd
  I am currently working at BSIT Software Services Pvt. Ltd., where I have gained experience in HTML, CSS, JavaScript, SQL, PHP, Bootstrap, and responsive web design. During my time here, I have completed various projects, including dynamic web applications like FindYourHostel.com (hostel room booking) and careers.bsitsoftware.com, as well as the DailyMart project for booking fruits, vegetables, and grocery items. Additionally, I have worked on several static websites.

## EDUCATION

**2022**

- **RVR&JC COLLEGE OF ENGINEERING**
  B. Tech
  6.64

**2018**

- **Narayana junior college**
  Intermediate
  940

**2016**

- **Kijiji high school**
  SSC
  8.0

## SKILLS

- Html, Css, Sql, javascript, php, bootstrap, powerbi,Apache spark, mongoDb

## PROJECTS

- **Find Your Hostel**
  I worked on the project 'findyourhostel.com,' a platform for booking hostel rooms. I was involved in all parts of the project, including user interface filtration, fetching hostels, wishlist functionality, and table creation for hostels. I also worked on the agent panel, where I primarily implemented features allowing agents to view all hostels, edit hostel details, and add a basic hostel without requiring payment. Additionally, I contributed to several functionalities in the admin panel and had overall command of the entire project.

- **Careers Bsit**

  I worked on the project 'careers.bsitsoftware.com,' a platform designed for users to apply for jobs and for companies to post job openings. My contributions included working on user profile management, password changes, and the job application filtration process, ensuring that users could only apply for a job once using the same email and phone number. Additionally, I developed features for the admin panel, including job posting and editing forms, as well as PDF viewing for applied and shortlisted jobs. I was involved in many other functionalities to enhance the platform's performance and user experience.
